Differential Equations and Linear Algebra (3rd Edition) By C. Henry Edwards, David E. Penney

Acclaimed authors Edwards and Penney combine core topics in elementary differential equations with those concepts and methods of elementary linear algebra needed for a contemporary combined introduction to differential equations and linear algebra. Known for its real-world applications and its blend of algebraic and geometric approaches, this book discusses mathematical modeling of real-world phenomena, with a fresh new computational and qualitative flavor evident throughout in figures, examples, problems, and applications.

First-Order Differential Equations; Mathematical Models and Numerical Methods; Linear Systems and Matrices; Vector Spaces; Higher-Order Linear Differential Equations; Eigenvalues and Eigenvectors; Linear Systems of Differential Equations; Matrix Exponential Methods; Nonlinear Systems and Phenomena; Laplace Transform Methods; Power Series Methods.

For future math majors, engineers, or scientists that have taken two or three semesters of Calculus.

Editorial Review

From the Back Cover

Acclaimed authors Edwards and Penney combine core topics in elementary differential equations with those concepts and methods of elementary linear algebra needed for a contemporary combined introduction to differential equations and linear algebra. Known for its real-world applications and its blend of algebraic and geometric approaches, this book discusses mathematical modeling of real-world phenomena, with a fresh new computational and qualitative flavor evident throughout in figures, examples, problems, and applications.

First-Order Differential Equations; Mathematical Models and Numerical Methods; Linear Systems and Matrices; Vector Spaces; Higher-Order Linear Differential Equations; Eigenvalues and Eigenvectors; Linear Systems of Differential Equations; Matrix Exponential Methods; Nonlinear Systems and Phenomena; Laplace Transform Methods; Power Series Methods.

For future math majors, engineers, or scientists that have taken two or three semesters of Calculus.

About the Author

C. Henry Edwards is emeritus professor of mathematics at the University of Georgia. He earned his Ph.D. at the University of Tennessee in 1960, and recently retired after 40 years of classroom teaching (including calculus or differential equations almost every term) at the universities of Tennessee, Wisconsin, and Georgia, with a brief interlude at the Institute for Advanced Study (Princeton) as an Alfred P. Sloan Research Fellow. He has received numerous teaching awards, including the University of Georgia's *honoratus* medal in 1983 (for sustained excellence in honors teaching), its Josiah Meigs award in 1991 (the institution's highest award for teaching), and the 1997 statewide Georgia Regents award for research university faculty teaching excellence. His scholarly career has ranged from research and dissertation direction in topology to the history of mathematics to computing and technology in the teaching and applications of mathematics. In addition to being author or co-author of calculus, advanced calculus, linear algebra, and differential equations textbooks, he is well-known to calculus instructors as author of *The Historical Development of the Calculus* (Springer-Verlag, 1979). During the 1990s he served as a principal investigator on three NSF-supported projects: (1) A school mathematics project including Maple for beginning algebra students, (2) A Calculus-with-*Mathematica* program, and (3) A MATLAB-based computer lab project for numerical analysis and differential equations students.

David E. Penney, University of Georgia, completed his Ph.D. at Tulane University in 1965 (under the direction of Prof. L. Bruce Treybig) while teaching at the University of New Orleans. Earlier he had worked in experimental biophysics at Tulane University and the Veteran's Administration Hospital in New Orleans under the direction of Robert Dixon McAfee, where Dr. McAfee's research team's primary focus was on the active transport of sodium ions by biological membranes. Penney's primary contribution here was the development of a mathematical model (using simultaneous ordinary differential equations) for the metabolic phenomena regulating such transport, with potential future applications in kidney physiology, management of hypertension, and treatment of congestive heart failure. He also designed and constructed servomechanisms for the accurate monitoring of ion transport, a phenomenon involving the measurement of

potentials in microvolts at impedances of millions of megohms. Penney began teaching calculus at Tulane in 1957 and taught that course almost every term with enthusiasm and distinction until his retirement at the end of the last millennium. During his tenure at the University of Georgia he received numerous University-wide teaching awards as well as directing several doctoral dissertations and seven undergraduate research projects. He is the author of research papers in number theory and topology and is the author or co-author of textbooks on calculus, computer programming, differential equations, linear algebra, and liberal arts mathematics.

Users Review

From reader reviews:

Kevin Burkes:

As people who live in the modest era should be update about what going on or details even knowledge to make all of them keep up with the era that is certainly always change and move forward. Some of you maybe can update themselves by studying books. It is a good choice for you but the problems coming to anyone is you don't know what kind you should start with. This Differential Equations and Linear Algebra (3rd Edition) is our recommendation so you keep up with the world. Why, because this book serves what you want and wish in this era.

Maria Asbury:

Hey guys, do you wants to finds a new book to read? May be the book with the name Differential Equations and Linear Algebra (3rd Edition) suitable to you? The book was written by renowned writer in this era. The actual book untitled Differential Equations and Linear Algebra (3rd Edition)is a single of several books this everyone read now. This book was inspired a lot of people in the world. When you read this book you will enter the new shape that you ever know previous to. The author explained their plan in the simple way, thus all of people can easily to know the core of this publication. This book will give you a large amount of information about this world now. So you can see the represented of the world in this particular book.

Robert Crawford:

Reading a book for being new life style in this season; every people loves to go through a book. When you read a book you can get a large amount of benefit. When you read guides, you can improve your knowledge, mainly because book has a lot of information upon it. The information that you will get depend on what types of book that you have read. If you need to get information about your examine, you can read education books, but if you act like you want to entertain yourself look for a fiction books, these kinds of us novel, comics, as well as soon. The Differential Equations and Linear Algebra (3rd Edition) will give you new experience in reading a book.

Tyrone Hogans:

This Differential Equations and Linear Algebra (3rd Edition) is brand-new way for you who has interest to look for some information mainly because it relief your hunger info. Getting deeper you in it getting knowledge more you know or you who still having little bit of digest in reading this Differential Equations

and Linear Algebra (3rd Edition) can be the light food for you personally because the information inside this particular book is easy to get simply by anyone. These books build itself in the form which can be reachable by anyone, sure I mean in the e-book web form. People who think that in e-book form make them feel sleepy even dizzy this publication is the answer. So there is no in reading a publication especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss the item! Just read this e-book sort for your better life in addition to knowledge.
