## New Directions in Conservation Medicine: Applied Cases of Ecological Health From Brand: Oxford University Press

In recent years, species and ecosystems have been threatened by many anthropogenic factors manifested in local and global declines of populations and species. Although we consider conservation medicine an emerging field, the concept is the result of the long evolution of transdisciplinary thinking within the health and ecological sciences and the better understanding of the complexity within these various fields of knowledge. Conservation medicine was born from the cross fertilization of ideas generated by this new transdisciplinary design. It examines the links among changes in climate, habitat quality, and land use; emergence and re-emergence of infectious agents, parasites and environmental contaminants; and maintenance of biodiversity and ecosystem functions as they sustain the health of plant and animal communities including humans.

During the past ten years, new tools and institutional initiatives for assessing and monitoring ecological health concerns have emerged: landscape epidemiology, disease ecological modeling and web-based analytics. New types of integrated ecological health assessment are being deployed; these efforts incorporate environmental indicator studies with specific biomedical diagnostic tools. Other innovations include the development of non-invasive physiological and behavioral monitoring techniques; the adaptation of modern molecular biological and biomedical techniques; the design of population level disease monitoring strategies; the creation of ecosystem-based health and sentinel species surveillance approaches; and the adaptation of health monitoring systems for appropriate developing country situations. *New Directions of Conservation Medicine: Applied Cases of Ecological Health* addresses these issues with relevant case studies and detailed applied examples. *New Directions of Conservation Medicine* challenges the notion that human health is an isolated concern removed from the bounds of ecology and species interactions. Human health, animal health, and ecosystem health are moving closer together and at some point, it will be inconceivable that there was ever a clear division.

### **Editorial Review**

#### **About the Author**

Alonso Aguirre is Executive Director of the Smithsonian-Mason Global Conservation Studies Program based at Smithsonian Conservation Biology Institute in Front Royal, and Associate Professor at the Department of Environmental Science and Policy in George Mason University, Fairfax, Virginia. He cofounded the emerging discipline of Conservation Medicine and has over 20 years of experience in conservation of biodiversity wildlife medicine and management in over 23 countries.

Rick Ostfeld is Senior Scientist and Animal Ecologist at the Cary Institute of Ecosystem Studies, Millbrook, New York.

Peter Daszak is President of EcoHealth Alliance (formerly Wildlife Trust). He is a leader in the field of conservation medicine and a respected disease ecologist.

### **Users Review**

#### **From reader reviews:**

##### **Christy Brodersen:**

As people who live in typically the modest era should be revise about what going on or data even knowledge to make these people keep up with the era which can be always change and move forward. Some of you maybe will update themselves by reading through books. It is a good choice to suit your needs but the problems coming to a person is you don't know which you should start with. This New Directions in Conservation Medicine: Applied Cases of Ecological Health is our recommendation to make you keep up with the world. Why, as this book serves what you want and want in this era.

##### **Sophia Myers:**

New Directions in Conservation Medicine: Applied Cases of Ecological Health can be one of your basic books that are good idea. We all recommend that straight away because this publication has good vocabulary that could increase your knowledge in terminology, easy to understand, bit entertaining but delivering the information. The author giving his/her effort to put every word into enjoyment arrangement in writing New Directions in Conservation Medicine: Applied Cases of Ecological Health but doesn't forget the main position, giving the reader the hottest and based confirm resource info that maybe you can be among it. This great information may drawn you into brand new stage of crucial considering.

##### **George Foulds:**

Your reading sixth sense will not betray an individual, why because this New Directions in Conservation Medicine: Applied Cases of Ecological Health publication written by well-known writer we are excited for

well how to make book that can be understand by anyone who else read the book. Written inside good manner for you, still dripping wet every ideas and composing skill only for eliminate your personal hunger then you still uncertainty New Directions in Conservation Medicine: Applied Cases of Ecological Health as good book not merely by the cover but also with the content. This is one guide that can break don't assess book by its cover, so do you still needing a different sixth sense to pick this specific!? Oh come on your reading through sixth sense already alerted you so why you have to listening to an additional sixth sense.

**Linda Doyle:**

You may get this New Directions in Conservation Medicine: Applied Cases of Ecological Health by go to the bookstore or Mall. Merely viewing or reviewing it can to be your solve challenge if you get difficulties for your knowledge. Kinds of this publication are various. Not only through written or printed but can you enjoy this book through e-book. In the modern era similar to now, you just looking because of your mobile phone and searching what your problem. Right now, choose your own ways to get more information about your publication. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose suitable ways for you.
