**Ethics and Science: An Introduction (Cambridge Applied Ethics)** By Adam Briggie, Carl Mitcham

Who owns your genes? What does climate science imply for policy? Do corporations conduct honest research? Should we teach intelligent design? Humans are creating a new world through science. The kind of world we are creating will not simply be decided by expanding scientific knowledge, but will depend on views about good and bad, right and wrong. These visions, in turn, depend on critical thinking, cogent argument and informed judgement. In this book, Adam Briggie and Carl Mitcham help readers to cultivate these skills. They first introduce ethics and the normative structure of science and then consider the 'society of science' and its norms for the responsible conduct of research and the treatment of human and animal research subjects. Later chapters examine 'science in society' - exploring ethical issues at the interfaces of science, policy, religion, culture and technology. Each chapter features case studies and research questions to stimulate further reflection.

## **Editorial Review**

### **Review**

"One of the seven titles in the "Cambridge Applied Ethics" series, this book introduces students of science and philosophy to issues often considered outside the central core of either discipline.... The book is attractively laid out and easy to read with a minimum of jargon. A useful resource for students in undergraduate and graduate courses in both science and philosophy, as well as in elective courses in science and ethics.... Recommended..."

**--K.M. Foos, emeritus, Indiana University East, CHOICE**

"...brings together an updated introduction to ethics, philosophy and the political sociology of science.... The structure of the chapters is clear.... Briggie and Mitcham's volume has everything one would in principle expect from a textbook.... presentations are as introductory and accessible as possible. This should make it particularly accessible to science and engineering students.... the material provided in this book is so rich and updated that it may be worth trying it in class..."
