Pulsar Astronomy (Cambridge Astrophysics) By Andrew G. Lyne, Francis Graham-Smith

Pulsars offer the opportunity to study physics in regimes unattainable in any terrestrial laboratory, and provide powerful probes for exploring the interstellar medium. This authoritative volume provides an ideal introductory account of pulsars for those entering the field, and an invaluable reference for established researchers. Pulsars, discovered by radioastronomers in 1967, are now studied at optical, X-ray and gamma-ray wavelengths. This book tells the exciting story of their discovery and then leads on to review all aspects of pulsar physics. This second edition has been thoroughly revised to include the latest understanding of millisecond and binary pulsars, and recent observations at X-ray and gamma-ray wavelengths. It includes extensive references and tables and a complete catalogue of all known pulsars. Written by two of the founders of the field, this book provides a unique reference source for researchers, and the only up-to-date introduction to the subject available for graduate students.

Editorial Review

Review

.."covers a broad range of topics in a concise way, and it is particularly strong in its discussions of pulsar emission phenomenology, pulsars as probes of the interstellar medium and timing irregularities in young pulsars. With its breadth and clear presentation, the new edition will continue to be a valuable introduction for graduate students and others...." Physics Today

About the Author

A pioneer of radio-astronomy, Professor Graham-Smith has been involved in pulsar research since 1967.

Andrew Lyne is head of the pulsar research group at Jodrell Bank.

From reader reviews:

Kelly Neidig:

What do you concerning book? It is not important along with you? Or just adding material if you want something to explain what your own problem? How about your time? Or are you busy person? If you don't have spare time to complete others business, it is gives you the sense of being bored faster. And you have spare time? What did you do? Everyone has many questions above. They must answer that question because just their can do which. It said that about e-book. Book is familiar on every person. Yes, it is right. Because start from on kindergarten until university need this specific Pulsar Astronomy (Cambridge Astrophysics) to read.

Lois Hernandez:

This Pulsar Astronomy (Cambridge Astrophysics) is brand-new way for you who has fascination to look for some information given it relief your hunger associated with. Getting deeper you onto it getting knowledge more you know or else you who still having tiny amount of digest in reading this Pulsar Astronomy (Cambridge Astrophysics) can be the light food for you because the information inside that book is easy to get by means of anyone. These books create itself in the form which can be reachable by anyone, that's why I mean in the e-book contact form. People who think that in publication form make them feel drowsy even dizzy this e-book is the answer. So there is not any in reading a e-book especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss the idea! Just read this e-book style for your better life and also knowledge.

Kenneth Salinas:

You may get this Pulsar Astronomy (Cambridge Astrophysics) by go to the bookstore or Mall. Just simply viewing or reviewing it could possibly to be your solve challenge if you get difficulties on your knowledge.

Kinds of this guide are various. Not only by written or printed but can you enjoy this book by means of e-book. In the modern era just like now, you just looking from your mobile phone and searching what your problem. Right now, choose your own personal ways to get more information about your book.
